

Eco-Revive

IV enhancer/Chain extender concentrate for PET recycling

There is increasing demand to add higher amounts of recycled content in PET bottles, sheets, strapping, monofilament and fibers. Scrap PET has low IV contributing to processing issues and loss of mechanical properties. F&D Plastics is offering a concentrate to increase IV of scrap PET resulting in more efficient use.

- Pellet concentrate that can be added to sheet, film, fiber, bottle scrap and PCR in an extruder to increase IV
- Use rate around 0.5-1.0% by weight of polymer
- IV increase of 15-30% possible
- Food contact approval
- Improved melt strength and extrusion performance
- Increase in tensile and impact properties
- Allows to increase PCR content in end products
- Economical, less capital intensive than SSP
